Read by	Raven v1.0.0

What this is for. I exist to help people grow their accounts by understanding what they have already made. I read public data only, take nothing TikTok does not show any logged-out visitor, and automate no engagement of any kind. Please do not point me at anyone in order to harass, impersonate or target them.

This is a sample. @example_creator does not exist and every number in here is invented, so you can see the shape of what Raven produces before installing anything.

On a real account the wording is the same and so is the caution: most findings on a young account come back undecided, and she says so rather than filling the space.

At a glance

The shape of the account, before I interpret anything.

3.0

posts a week

9.28%

like rate · 0.65% comments

Posting rhythm

Currently posting about **3.0 times a week** (steady against a lifetime rate of 3.0).

Longest run of consecutive days: **1**. Longest silence: **3 days**.

What I could not tell you

Watch time, retention, traffic sources and who your audience is are TikTok's to give and it only gives them to you, inside your own analytics. I have not tried to guess at them.

- Watch time and retention — TikTok shows these only to the account owner.
- Traffic sources and how people found each video.
- Follower growth over time, and who those followers are.
- Anything about videos that were deleted or made private before this run.
- Why a post did well. This measures what correlates with reach, which is not the same as what caused it.

What to make next

Things to film, in the order I would do them. The first few come out of your own numbers; the later ones from what the rest of your niche is doing and asking.

1 **Make more about understood and properly**

42 posts, averaging 144% of your own average. This one is proven, not a hunch.

[Do more of this](#) · [from your own catalogue](#)

2 **Make more about public and building**

13 posts, averaging 144% of your own average. This one is proven, not a hunch.

[Do more of this](#) · [from your own catalogue](#)

3 **Test looked and howto properly**

It is running at 124% of your average across 8 posts, which is promising but not yet provable. About 5 more on this theme would settle it.

[Worth testing](#) · [from your own catalogue](#)

4 **Stop making spots and limited in its current form**

9 posts at 29% of your average, and that gap is real rather than noise. The topic may be fine — look at how these are shot and captioned before abandoning it.

[Stop or rework](#) · [from your own catalogue](#)

5 **Break up your opening lines**

93.9% of your captions open with phrasing you have used at least three times.

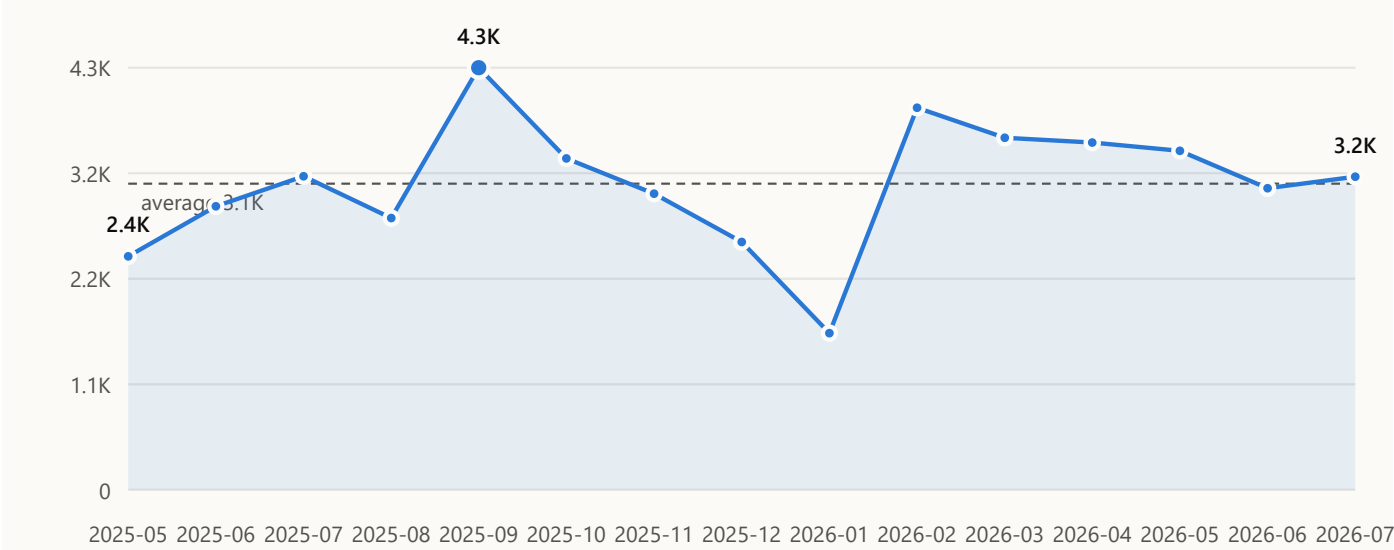

Repetition in the opener is one of the least visible drags on reach.

[Vary your hooks](#) · [from hook teardown](#)

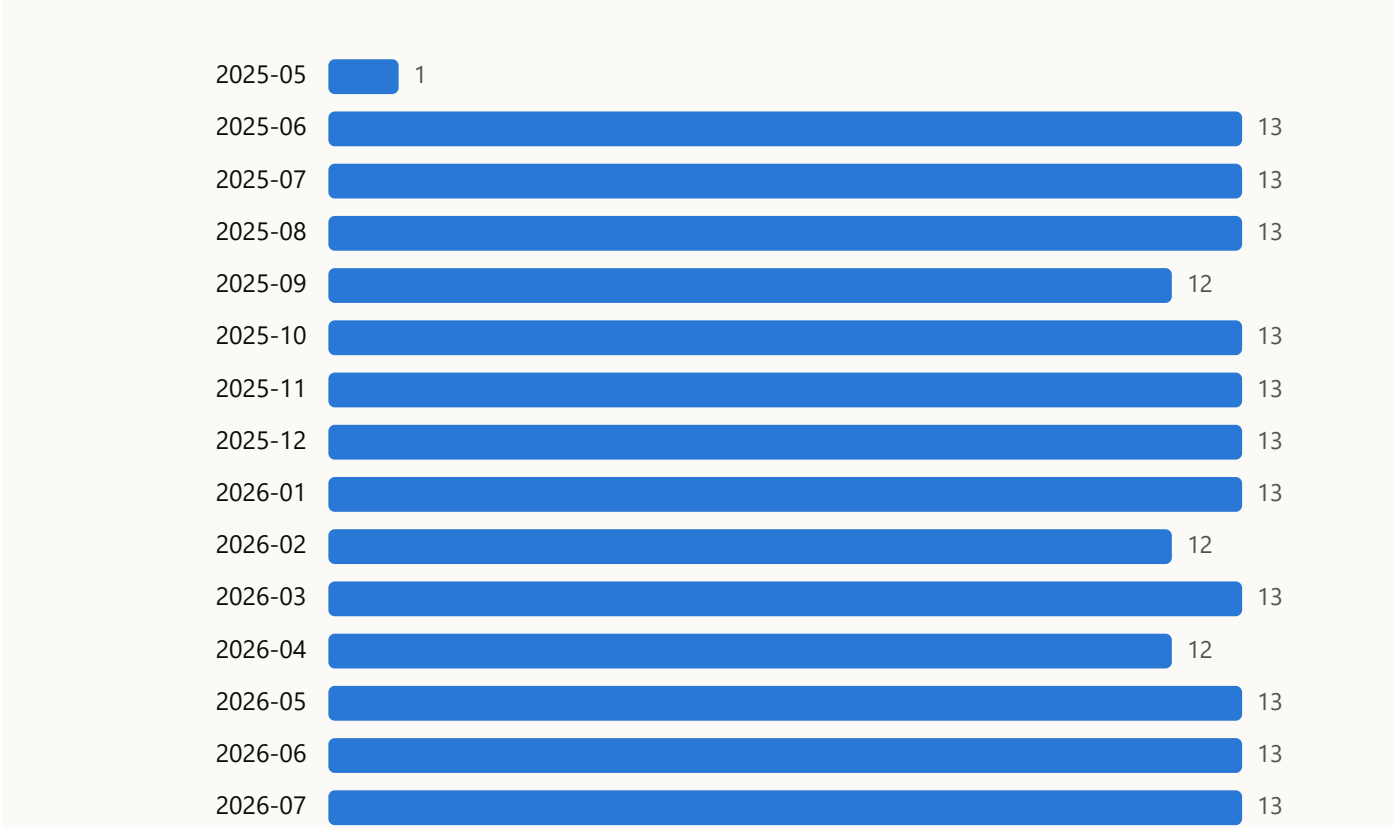

Reach and trajectory

Which way this is going, month by month.

Average views per post, by month

Posts published per month

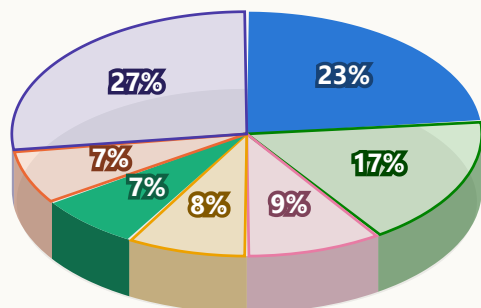

Month	Posts	Avg views	Median	Best
2025-05	1	2,388	2,388	2,388
2025-06	13	2,900	2,182	8,183

Month	Posts	Avg views	Median	Best
2025-07	13	3,207	2,163	16,073
2025-08	13	2,779	2,217	8,731

2026-07	13	3,203	2,649	7,299

What this account is about

I did not decide these in advance. I grouped your captions and let the themes fall out of what you actually write about.

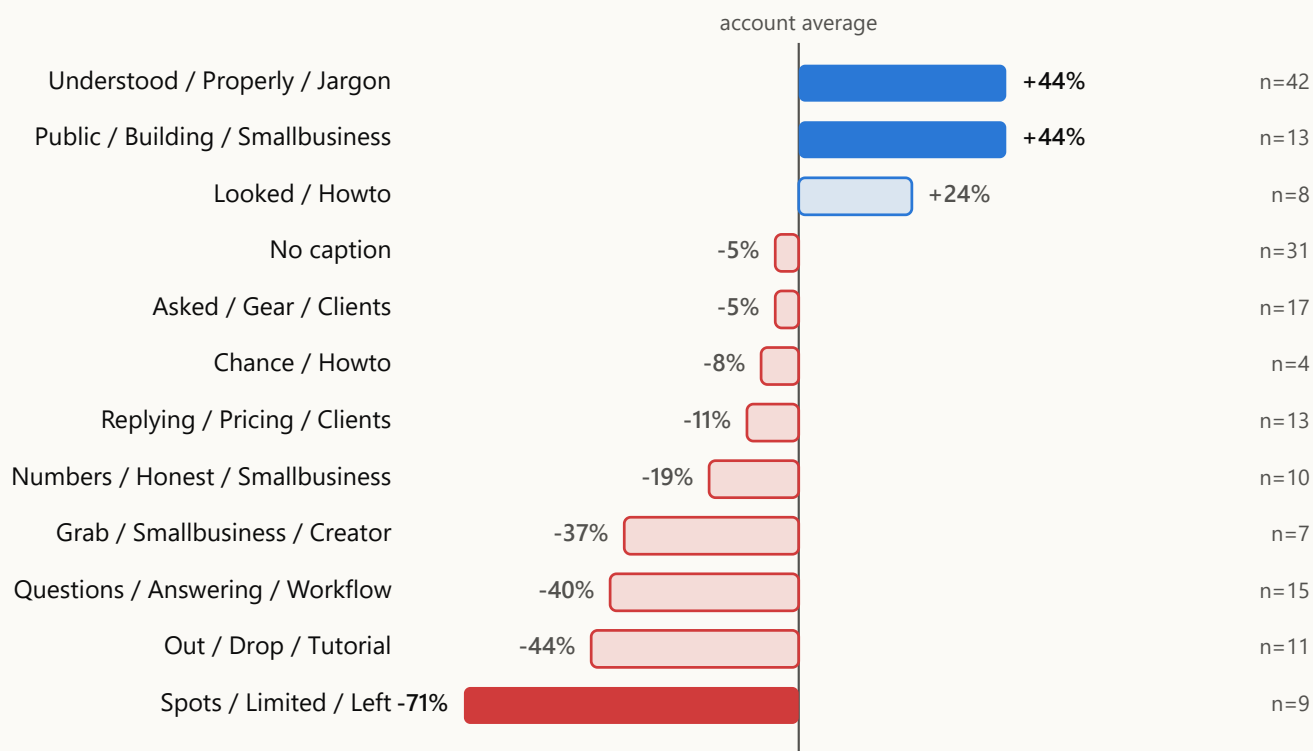

Share of posts by theme

Understood / Properly / Jargon	42 · 23%
No caption	31 · 17%
Asked / Gear / Clients	17 · 9%
Questions / Answering / Workflow	15 · 8%
Public / Building / Smallbusiness	13 · 7%
Replying / Pricing / Clients	13 · 7%
Other (6 themes)	49 · 27%

filled = the difference cleared a significance test · outlined = not enough evidence yet, treat as a hint rather than a finding

Reach by theme, against this account's own average

Themes were found by tf-idf + k-means (pure python). The feed reads as about **7.3 distinct styles**.

Theme	Posts	Share	Avg views	vs average	Evidence	Call
Understood / Properly / Jargon	42	23.3%	4,560	+44%	solid evidence	Keep

Theme	Posts	Share	Avg views	vs average	Evidence	Call
Public / Building / Smallbusiness	13	7.2%	4,552	+44%	early signal	Keep
Looked / Howto	8	4.4%	3,938	+24%	not enough data yet +5 posts to settle	Test more
No caption	31	17.2%	3,004	-5%	not enough data yet	Test more
Asked / Gear / Clients	17	9.4%	2,997	-5%	not enough data yet +8 posts to settle	Test more
Chance / Howto	4	2.2%	2,916	-8%	not enough data yet +4 posts to settle	Test more
Replying / Pricing / Clients	13	7.2%	2,813	-11%	not enough data yet +37 posts to settle	Test more
Numbers / Honest / Smallbusiness	10	5.6%	2,554	-19%	not enough data yet	Test more
Grab / Smallbusiness / Creator	7	3.9%	1,993	-37%	not enough data yet +1 posts to settle	Test more
Questions / Answering / Workflow	15	8.3%	1,894	-40%	not enough data yet +10 posts to settle	Test more
Out / Drop / Tutorial	11	6.1%	1,767	-44%	not enough data yet	Test more
Spots / Limited / Left	9	5.0%	918	-71%	solid evidence	Ditch

How to read what I have called each one

Keep beats your average and I have the evidence for it. **Ditch** trails your average and I have the evidence for that too. **Test more** means it looks promising or poor but rests on too few posts for me to say — which is the honest answer for most themes on most accounts, and I would rather give it than invent a verdict. **Try** is something your niche is doing that you have not.

Hooks and captions

What your opening line does, and whether it shows up in the numbers.

Caption features against reach

Feature	Posts with it	Avg with	Avg without	Difference	Evidence
opens with a number	4	7,861	3,061	+157%	not enough data yet
how-to framing	13	7,037	2,866	+146%	early signal
first person ('I', 'my')	23	5,088	2,886	+76%	early signal
contains a number	49	4,218	2,774	+52%	solid evidence
addresses the viewer ('you')	45	3,025	3,215	-6%	not enough data yet
has a call to action	33	1,948	3,441	-43%	solid evidence

These overlap with each other, and with whatever mood you were in that week. When I say a gap is real, I mean the gap is real — not that the feature caused it.

Are the openers templated?

169 posts (93.9%) open with a phrasing this account has used at least three times. Pooled against everything else, that group is not enough data yet.

Repeated opener	Posts	Avg views	vs the rest	Evidence
"you asked so here..."	17	2,997	-6%	not enough data yet
"answering your questions about..."	15	1,894	-42%	not enough data yet
"grab this before it..."	15	1,921	-41%	not enough data yet
"day of building this..."	13	4,552	+49%	early signal
"replying to a comment..."	13	2,813	-12%	not enough data yet
"how i finally understood..."	13	7,037	+146%	early signal
"what months of this..."	11	3,159	+0%	not enough data yet
"before and after days..."	11	5,070	+67%	not enough data yet
"new drop out now..."	11	1,767	-46%	not enough data yet
"my honest numbers after..."	10	2,554	-20%	not enough data yet
"last chance on this..."	10	1,785	-45%	not enough data yet
"stop doing this with..."	9	2,815	-12%	not enough data yet

Openings that already worked here

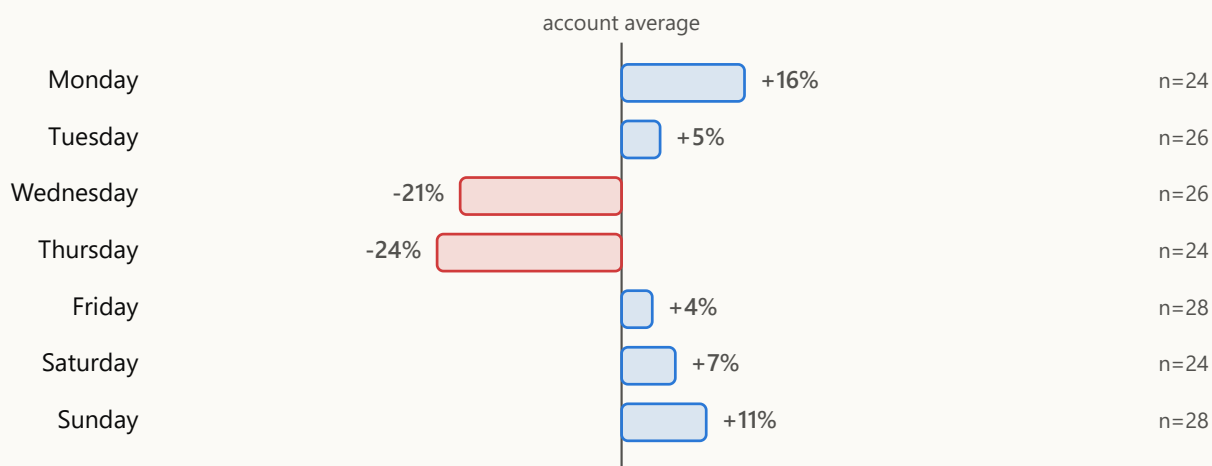

Pulled from posts that beat your own average, so the voice is already yours. Reuse the shape, not the words.

- **Before and after 90 days**
20,756 views · 655% of average · No caption
- **3 ways to fix your framing in under a minute**
17,201 views · 543% of average · Understood / Properly / Jargon
- **How I finally understood setup**

Timing and consistency

When you post, and whether it has made any difference.

Reach by day of week, against the account average

Reach by video length

Best slot

The strongest day is **Monday** (index 116) and the strongest hour is **17:00** (index 118). Neither is proven yet — treat them as the best available guess rather than a rule. Hours are in this machine's local timezone.

Does posting more often help?

In months where this account posted more than its median of 13 posts, videos averaged **0** views, against **3,167** in quieter months. Evidence: not enough data yet.

“Post daily” is good advice in general. This is whether it has shown up in your own numbers yet.

What the niche is talking about

What the rest of your niche was doing while I was looking.

Where I could and could not get to

A partial look is not the whole picture, so here is exactly what I managed to read.

The same thirty days are in the spreadsheet next to this, with room for your caption and a box to tick when it goes out.

The frameworks behind this

The playbook my checks are built on, credited to @teezytheturtle. I am setting it out so you can use it without me.

1. Find the audience by studying who already has it

Somebody is already making content for the people you want. Read how they name their audience in their bio, what they post about, what register they write in. That is your positioning research, and it is free.

2. The profile converts, the content only delivers

Reach gets someone to a video; the profile turns them into a follower. Four things do that work: a picture that still reads at comment size, a bio of three or four scannable lines that names who it is for and what they get, a link so the attention has somewhere to go, and pinned posts that show your best work first. The audit page has the specifics.

3. A unique style is found by subtraction

Test several kinds of content, drop the ones that do not travel, replace them, repeat. Your feed currently reads as about **7.3 distinct styles**. That loop is what the theme table on this report is measuring — Keep, Ditch and Test more are the three moves in it. The trap is quitting a style before you have made enough of it to know.

4. The hook is the whole first second

A strong opening buys you the rest of the video, and a script that holds after the hook is what turns a view into watch time. Vary the shape of your openings — repeating the same opener is one of the least visible ways to lose reach, and the hooks page checks for exactly that.

5. Post often enough to learn

Daily is the advice, and the reason is not the algorithm — it is that you cannot find your style from six posts. Frequency is what makes everything else in this report measurable. The timing page tests whether it has shown up in your own numbers yet.

Method, limits and credits

How I got these numbers

I read the catalogue via **invented data (see examples/make_sample.py)**, which returns the same public metrics any visitor can see: views, likes, comments, shares, caption, duration and upload time. Nothing was downloaded and no engagement was automated.

I grouped the themes by tf-idf + k-means (pure python). Where several counts fitted about equally well I took the simpler split, because a feed shattered into twelve themes is not something anyone can act on.

I test every comparison with Welch's t-test on log-transformed views. View counts are wildly skewed, so without the log one viral post carries a whole bucket and I end up telling you something that is not true. I never call a group of fewer than eight posts significant, however large the gap looks — “solid evidence” means $p < 0.01$ and “early signal” means $p < 0.05$. Everything else I report as not settled.

I converted upload times in this machine's local timezone, so “best hour” is in your clock, not UTC.

What I genuinely cannot see

Watch time, retention curves, traffic sources, follower growth over time and who your audience is are things TikTok shows only to the account owner, inside their own analytics. I cannot reach them for an account I do not own, and neither can anything else. A good deal of creator advice rests on those numbers; where it does, I have tested what I can measure instead and told you which is which rather than inventing a stand-in.
